Summary

Intermediate Software Engineer with 3+ years of experience (Canada, CERN, Morocco) building full-stack systems in TypeScript and Python. Built Evertz's test-automation platform for broadcast hardware; promoted within 18 months; mentored a co-op student. Languages: English, French, Arabic, Russian, Italian, Chinese.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL, Bash, HTML/CSS
Frontend: React, Angular, Ionic/Capacitor, RxJS, Vite
Backend: Node.js, NestJS, Express, FastAPI, REST APIs, Socket.IO (WebSockets), Prisma
Cloud & DevOps: Docker, Kubernetes, AWS, Firebase/GCP, GitHub Actions (CI/CD), Linux, nginx, pm2, Git
Databases: PostgreSQL, MongoDB, Oracle, MySQL, Redis, Firestore
Testing & ML: Pytest, Selenium, Puppeteer, Vitest, PyTorch, scikit-learn, NumPy

Experience

Evertz — Burlington, ON
Intermediate Software Engineer — *May 2026 – Present*
Software Engineer — *Nov 2024 – May 2026*

- Designed and built the lab's test-automation platform end to end (**React**, **Node.js**, **Redis**, **pm2**, **nginx**): login and roles, device and firmware selection, test launching and live monitoring for broadcast hardware (ITXR, Scorpion, 5800MSC).
- The platform drives **Selenium**, **SSH** and **REST** regression suites of **8,700+ automated checks** across **76 devices**, turning 14-hour regression runs into unattended overnight jobs.
- Built an AI **Microsoft Teams** bot answering test-capability questions; cut response time **5x** (20 s to 4 s) via context filtering.
- Top contributor to the test-automation monorepo (**30% of 1,661 commits**, 14 engineers); wrote design docs for my projects.
- Built **Python**/**Bash** automation saving **about 8 hrs/week per team**; containerized dev environments with **Docker**, cutting onboarding from **hours to 15 minutes**.
- Mentored a co-op student for 8 months: assigned and scoped tasks and onboarded them to the team's tooling and practices.

CERN – European Organization for Nuclear Research — Geneva, Switzerland
Full Stack Developer — *Jun 2022 – Sep 2022*

- Migrated the SWAN gallery to a **JupyterLab** extension (**Python**, **TypeScript**); one-click downloads cut support tickets **40%+**.
- Automated end-to-end tests with **Puppeteer** and shipped with **Docker** and **Kubernetes**, reducing deployment time by **60%** with zero-downtime releases. Published a technical report on the work.

Orange – Cloud Whale — Casablanca, Morocco
Software Engineer — *Dec 2021 – Jun 2022*

- Optimized **Oracle SQL** queries over **300,000+** records and automated operations with **Linux** shell and **Python** scripts.

DIGI4 — Casablanca, Morocco
Full Stack Developer — *Sep 2020 – Mar 2021*

- Built full-stack **Angular**/**Node.js** features on **AWS**; led design and delivery of a client's comment and ranking system (**Agile**).
- Engineered a **Node.js** geolocation pipeline with the **Google Maps API** that located **100,000+** stores, enriching **MongoDB** records with coordinates and metadata to improve search.

Projects

Renovapp – Bilingual Home-Services Marketplace, Web & Mobile | *Angular, Ionic, TypeScript, Node.js, Firebase, Stripe*

- Designed and built a two-sided marketplace end to end: an **Angular** web app, **iOS/Android** apps (**Ionic, Capacitor**) and a **Node.js/Express** API on **Firebase Cloud Functions**, sharing one TypeScript library.
- Integrated **Stripe Connect** with idempotent charges, holds and payouts; secured the API server-side (Firestore rules, **Zod**, rate limiting) with **GitHub Actions** CI.

Pulse – Uptime Monitoring Service | *NestJS, TypeScript, PostgreSQL, Prisma, Docker, GitHub Actions*

- Built a REST API and scheduled probe worker that monitors URLs and collapses consecutive failures into timed incidents.
- Hardened against **SSRF** by validating the resolved IP on every redirect hop; wrote **90 integration tests** against real PostgreSQL and HTTP (no mocks), deployed to Fly.io by CI.

Education

University of Padova — Padua, Italy
M.Sc. in Computer Science – Grade: 110/110 – Thesis: Decentralized Fine-tuning for ML Models (PyTorch) — *Sep 2022 – Jul 2024*

Wuhan University — Wuhan, China
B.Sc. in Software Engineering – GPA: 3.95/4.00 — *Sep 2018 – Jun 2022*
